Lake Company

"The Original Irrigation Manufacturer"

The Original Irrigation Manufacturer and Wholesaler since 1977.

As a single source wholesale distributor for irrigation parts and systems, Lake Company provides high quality pumps, pipe, valves, fittings, and wheel moves to satisfy the needs of the irrigation industry. The following product lines are available for sale:

- Aluminum
- Pumps
- Sprinklers and Fittings
- Wheelmove Systems

RAINTITE™ Now Available!

RainTite is the leak-free aluminum pipe that will make your operation run smoother. The light weight design makes RainTite quick and easy to install and breakdown, saving you valuable time and money.

Pump Parts

We sell quality OEM-manufactured pump parts for all your pump equipment. Every part is ready to ship anywhere - domestic or international. Call us for a quote!

Pump Lines

PowerPrime™ and Premier Pump & Power manufacture pumps for all types of applications, from low volume to high flows. Request a quote or inquire about pricing.

Pump Partners

Ask about our
Specialty Pumps!

We don't just SELL IT, we MAKE IT!

Quality Products. Made Right.

GATED PIPE ACCESSORIES

OPEN TOP HYDRANT GALVANIZED

OTH

This open top hydrant is made from 22 gauge galvanized steel for corrosion resistance, and comes equipped with rubber gasket, stainless steel clamp, and one large Rite-Flow gate.

This hydrant is used with concrete pipeline risers and expanded end gated pipe for furrow irrigation. Its rubber gasket seals automatically when the hydrant is forced over a concrete riser. Expanded end gated pipe slips easily over the hydrant outlets for quick line assembly.

Standard size hydrants are 48" high with outlets located 19" from the bottom of the hydrant to the center of the outlet. Single and double outlets in other sizes are available.

| PN# | Description |
|--------|--------------------|
| 710541 | 17" w/1-6" outlet |

Notes:

The specifications above are based on Alloy 3004-H26 with a yield strength of 23,000 psi, and a 2 to 1 safety factor.
FCR gates have a maximum rating of 20 psi. Rite-Flo gates have a maximum pressure rating of 40 psi.

| 711029 | 10" | 2600 | 83.00 lbs. |
| 711711 | 10" Dual | — | 83.00 lbs. |

Ringlock Field Filters are ideal for use in areas where irrigation water is muddy, trashy and generally unsuitable to run through a sprinkler system. A stainless steel screen 12' long is used as the filtering media and has orifices of 1/16" diameter. The filters may be flushed while in operation. The filter has a straight through design and may be used either in the line itself or at the pump discharge. Flow capacity ranges from 750 - 2600 GPM.

Ringlock Filters (Associated)

Coupled Galvanized Pipe Risers

LAKE COMPANY

Portable Aluminum Water Loading Stand

This portable loading stand is fabricated from heavy aluminum tubing. The entire stand can be easily transported on a pickup truck and quickly assembled by one man. In use, the large base fills with water, giving the unit great stability.

STANDARD DIMENSIONS:

BASE- six feet square

HEIGHT- twelve feet to bottom of spout

OUTLET SPOUT- seven feet from riser

4" Water Loading Stand # 710834 - 80 Lbs.

6" Water Loading Stand # 710836 - 125 Lbs.

8" Water Loading Stand # 710838 - 165 Lbs.

HYDRANTS

"QUICK SEAL" HYDRANT

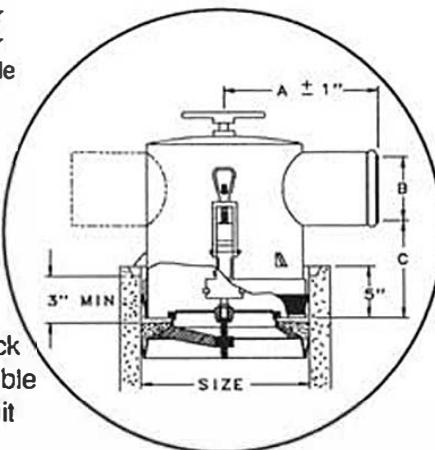

USE

The Waterman "Quick Seal" hydrant is ideal for adapting valves installed inside concrete risers for use with gated pipe. It can also be used to provide directional flow from a valve riser.

FEATURES

- Light weight roll-formed aluminum body
- Corrosion resistant
- Quick acting stirrup clamps expand neoprene gasket inside riser for tight sealing
- Heads to 20 feet. Choice of standard quick coupler, or straight outlets - single or double
- Standard dimensions or customized to suit your needs.

SLIP-SEAL HYDRANT

This unit is custom built from roll-formed aluminum sheet featuring an abrasion-resistant rubber gasket. When ordering specify O.D. of concrete riser, height of body (H), type (quick coupler or straight), size (B) and height (C) of outlets. Center gates or "octopus gate" type installations can also be shipped.

FLOW METERS

GROOVED & SMOOTH-END FLOWMETER MODEL MG100 / MS 100

DESCRIPTION

Model MG100 and MS100 meters are designed to provide high pressure rating and "Main Line" meter accuracy in an inexpensive package. The flowmeters are manufactured to comply with the applicable provisions of the American Water Works Association Standard No. C704-92 for propeller type flowmeters. The impeller and drive assembly are fully accessible through the open end of the meter tube.

Impellers are manufactured of high-impact plastic, capable of retaining their shape and accuracy over the life of the meter. Each impeller is individually calibrated at the factory to accommodate the use of any standard McCrometer register, and since no change gears are used, the flowmeters can be field-serviced without the need for factory recalibration. Factory lubricated, stainless steel bearings are used to support the impeller shaft. The shielded bearing design limits the entry of materials and fluids into the bearing chamber providing maximum bearing protection.

An instantaneous flowrate indicator is standard and available in gallons per minute, cubic feet per second, liters per second and other units. The register is driven by a flexible steel cable encased within a protective vinyl liner. The register housing protects both the register and cable drive system from moisture while allowing clear reading of the flowrate indicator and totalizer.

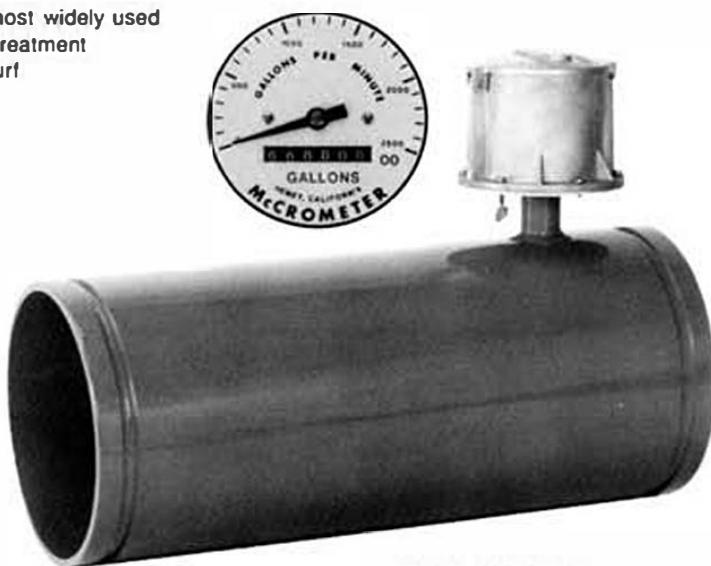

INSTALLATION

Standard installation is horizontal mount. If the meter is to be mounted in the vertical position, please advise the factory. A straight run of full pipe the length of five diameters ahead and one diameter behind the meter is the minimum normally recommended.

APPLICATIONS

The McCrometer propeller meter is the most widely used flowmeter for municipal and wastewater treatment applications as well as agricultural and turf irrigation measurement. Typical applications include:

- Center pivot systems
- Sprinkler irrigation systems
- Drip irrigation systems
- Golf course and park water management
- Gravity turnouts from underground pipelines
- Commercial nurseries
- Water and Wastewater management

Data From McCrometer

FLOW METERS

GROOVED-END MODEL MG100 / MS100

SPECIFICATIONS

PERFORMANCE

ACCURACY/REPEATABILITY: $\pm 2\%$ of reading guaranteed throughout full range. $\pm 1\%$ over reduced range. Repeatability 0.25% or better.

RANGE: (see dimensions chart below).

HEAD LOSS: (see dimensions chart below).

MAXIMUM TEMPERATURE: (Standard Construction) 160°F constant

PRESSURE RATING: 150 psi.

MATERIALS

TUBE: epoxy-coated carbon steel.

BEARING ASSEMBLY: Impeller shaft is 316 stainless steel. Ball bearings are 440C stainless steel.

MAGNETS: Permanent type. Cast or sintered alnico.

BEARING HOUSING: Brass; stainless steel optional.

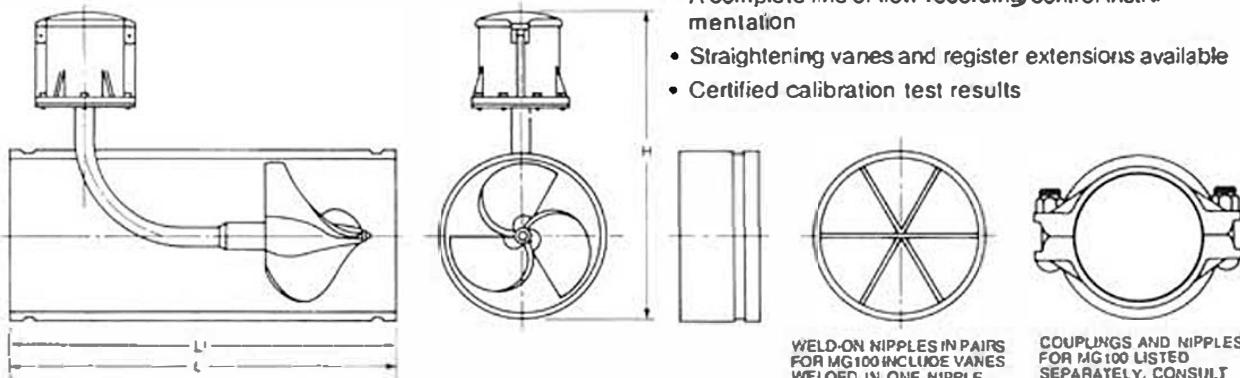

IMPELLER: Impellers are manufactured of high-impact plastic, retaining their shape and accuracy over the life of the meter. High temperature impeller is optional.

REGISTER: An instantaneous flowrate indicator and six-digit straight-reading totalizer are standard. The register is hermetically sealed within a die cast aluminum case. This protective housing includes a domed acrylic lens and hinged lens cover with locking hasp.

COATING: Fusion-bonded epoxy.

OPTIONS

- Forward/reverse flow measurement
- High temperature construction
- "Over Run" bearing assembly for higher-than-normal flowrates
- Electronic Propeller Meter available in all sizes of this model
- A complete line of flow recording/control instrumentation
- Straightening vanes and register extensions available
- Certified calibration test results

McCORMETER reserves the right to change design or specifications without notice.

GENERAL INFORMATION

WATER

One miner's inch = $1\frac{1}{2}$ cubic feet per minute = 11.25 U. S. gallons per minute = flow per minute through 1 inch square opening in 2 inch thick plank under a head of $6\frac{1}{2}$ inches to centre of orifice in Arizona, California, Montana, Nevada and Oregon. 9 U.S. gallons per minute in Idaho, Kansas, Nebraska, N.M., N.D., S.D., Utah.

One horse-power = 33,000 ft. pounds per minute.

$$\text{Cubic feet per second} = \frac{\text{Gallons per minute}}{449}$$

$$\text{Cubic feet per minute} = \frac{\text{Gallons per minute}}{7.48}$$

$$\text{Theoretical water} = \frac{\text{U.S.G.P.M.} \times \text{head in feet} \times \text{Sp. Gr.}}{\text{horse-power}} = \frac{3960}{3960}$$

$$\text{Theoretical water} = \frac{\text{U.S. gallons per minute} \times \text{head in pounds}}{\text{horse-power}} = \frac{1714}{1714}$$

$$\text{Brake horse-power} = \frac{\text{Theoretical water horse-power}}{\text{Pump efficiency}}$$

$$\text{Velocity in feet} = \frac{408 \times \text{U.S. gallons per min.}}{\text{per second}} = \frac{32 \times \text{G.P.M.}}{(\text{Diameter of pipe in inches})^2 \times \text{pipe area}}$$

One acre-foot = 325,850 U.S. gallons.

1,000,000 U.S. gallons per day = .005 U.S. gallons per minute.

500 pounds per hour = 1 U.S. gallon per minute.

Doubling the diameter of a pipe or cylinder increases its capacity four times.

Friction of liquids in pipes increases as the square of the velocity.

Velocity in feet per minute necessary to discharge a given volume of water,

$$\text{in a given time} = \frac{\text{Cu. Ft. of water} \times 144}{\text{area of pipe in sq. inches}}$$

Area of required pipe, the volume and velocity of water

$$\text{being given} = \frac{\text{No. cu. ft. water} \times 144}{\text{Vel. in ft. per min.}}$$

from this area the size pipe required may be selected from the table of standard pipe dimensions.

Atmospheric pressure at sea level is 14.7 pounds per square inch. This pressure with a perfect vacuum will maintain a column of mercury 29.9 inches or a column of water 33.9 feet high. This is the theoretical distance that water may be drawn by suction. In practice, however, pumps should not have a total dynamic suction lift greater than 25 feet.

Net horse-power = the theoretical horse-power necessary to do the work.

Net horse-power = barrels per day x pressure x .000017.

Net horse-power = barrels per hour x pressure x .000408.

Net horse-power = gallons per minute x pressure x .000583

The customary method of indicating specific gravity of petroleum oils in this country is by means of the Baume scale. Since the Baume scale, for specific gravities of liquids lighter than water, increases inversely as the true gravity, the heaviest oil, i.e., that which has the highest true specific gravity, is expressed by the lowest figure of the Baume scale; the lightest by the highest figure.

MISCELLANEOUS

Areas of circles are to each other as the squares of their diameters.

Circumference-diameter of circle x 3.1416.

Area circle-diameter squared x .7854.

Diameter circle-circumference x .31831.

Volume of sphere-cube of diameter x .5236.

Square feet-square inches x .00695.

Cubic feet-cubic inches x .00058.

Cubic yard-cubic feet x .03704.

Statute miles-lineal feet x .00019.

Statute miles-lineal yards x .000568.

1 gallon = 8.33 pounds.

1 liter = .2642 gallons.

1 cu. ft. = 7.48 gallons and/or 62.35 pounds.

1 meter = 3.28 feet.

1 millimeter = .03937 inches.

STATIC HEAD

Static Head is the vertical distance between the free level of the source of supply and the point of free discharge, or to the level of the free surface of the discharged water.

TOTAL DYNAMIC HEAD

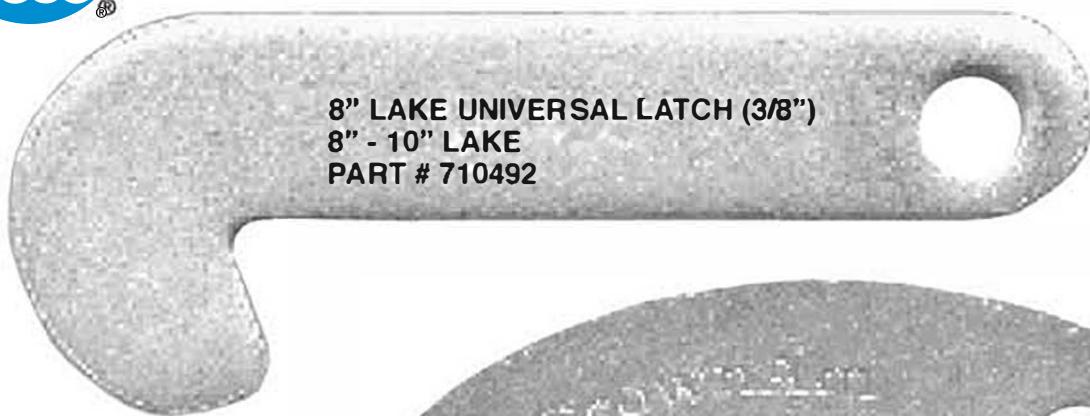

TOTAL DYNAMIC HEAD is the vertical distance between source of supply and point of discharge when pumping at required capacity, plus Velocity Head, friction, velocity, entrance and exit losses.

TOTAL DYNAMIC HEAD, as determined on test where Suction Lift exists, is the reading of a mercury column connected to the suction nozzle of pump, plus the reading of a pressure gauge connected to discharge nozzle of pump, plus vertical distance between point of attachment of mercury column and centre of gauge, plus excess, if any, of Velocity Head of discharge over Velocity Head of suction, as measured at points where the instruments are attached, plus head of water resting on mercury column, if any.

HOW TO IDENTIFY FITTINGS & GASKETS

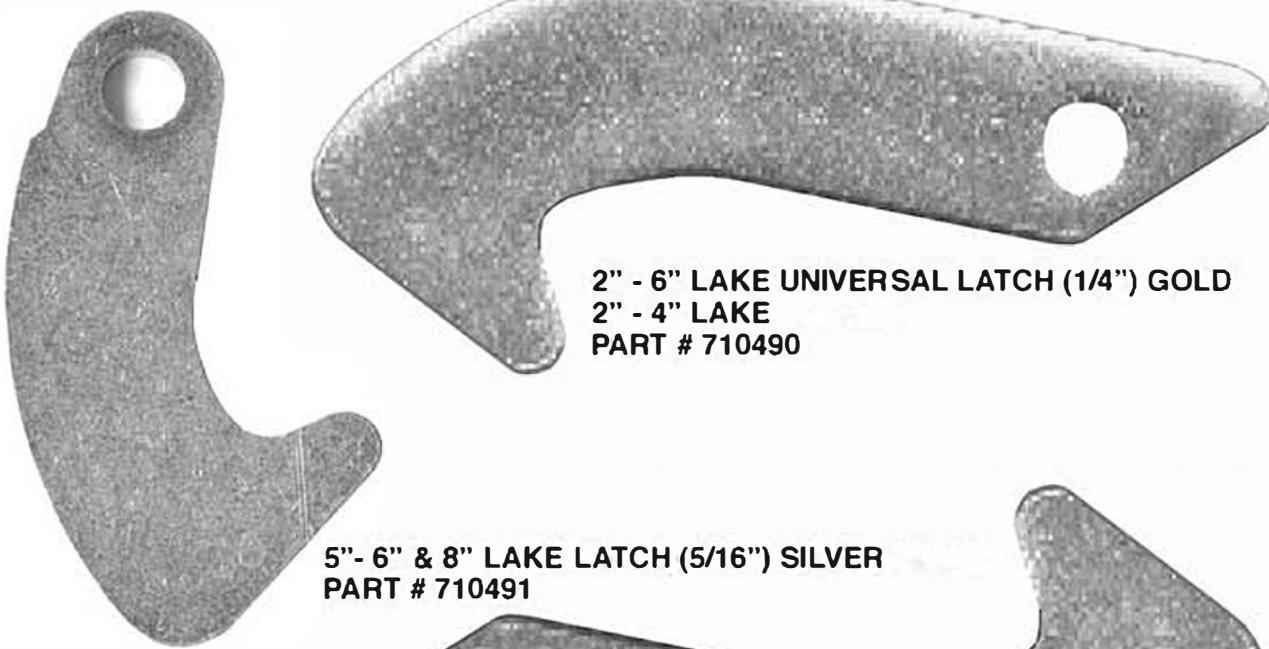

8" LAKE UNIVERSAL LATCH (3/8")
8" - 10" LAKE
PART # 710492

CROWN LATCH (1/4")
2" - 6" FOR CROWN FITTINGS
PART #717491

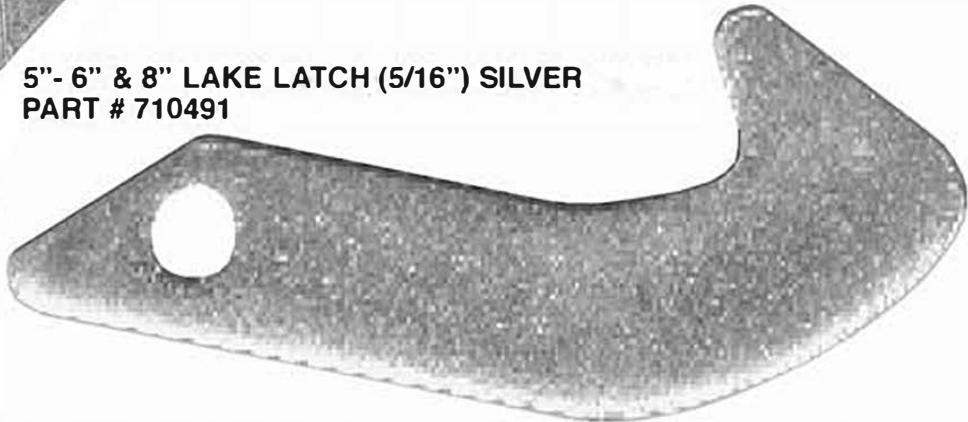

2" - 6" LAKE UNIVERSAL LATCH (1/4") GOLD
2" - 4" LAKE
PART # 710490

5"- 6" & 8" LAKE LATCH (5/16") SILVER
PART # 710491

SMALL LATCH (1/4")
VOE SHORT LATCH
PART #710476

THE ORIGINAL IRRIGATION MANUFACTURER AND WHOLESALER

As a single source wholesale distributor for irrigation parts and systems, Lake Company provides high quality pipe, valves, fittings, wheel moves and pumps to satisfy the needs of the irrigation industry.

Founded in 1977, Lake Company is headquartered in Bakersfield, CA, where we strive to deliver exceptional equipment and first rate service. Each of us at Lake Company take a personal investment in providing you service, from first contact to delivery.

As a pipe manufacturer, we understand the need for quality and durable products. We stand behind our pipe and fittings, and proudly see them still used in fields decades after they were originally manufactured at our California tube mill and foundry locations.

Our quality control ensures that you receive the superior product. Each joint of pipe we manufacture is hydrostatically tested to withstand more than 200 PSI during the manufacturing process. This means you get pipe that will not leak and that is backed up by our warranty.

Quality Products. Made Right. Made in America.
